

## Strategy Overview

Free cash flow has long been emphasized by investors as a key predictor of a company's strength. Companies that pay cash dividends, one indication of strong free cash flow, have historically outperformed the broader market. Focusing strictly on dividend payments, however, misses two key indicators of strong free cash flow: net share repurchases and net debt pay-down. The manager believes that a focus on all three factors - dividend payments, net share repurchases and net debt pay-down, a trio collectively known as shareholder yield - produces a portfolio of companies that offer strong free cash flow characteristics.

## Fund Description

The Emerging Foreign Shareholder Yield ETF seeks investment results that closely correspond to the price and yield performance, before fees and expenses, of the Cambria Emerging Shareholder Yield Index. The Index consists of stocks with high cash distribution characteristics. The initial screening universe for this Index includes stocks in emerging market countries with market capitalizations over \$200 million. The Index is comprised of the 100 companies with the best combined rank of dividend payments and net stock buybacks, which are the key components of shareholder yield. The Index also screens for value and quality factors, and for companies that demonstrate low financial leverage.

The Cambria ETFs are distributed by SEI Investments Distribution Company, 1 Freedom Valley Drive, Oaks, PA 19456, which is not affiliated with Cambria Investment Management, LP, the Investment Adviser for the Fund.

ETFs are subject to commission costs each time a "buy" or "sell" is executed. Depending on the amount of trading activity, the low costs of ETFs may be outweighed by commissions and related trading costs.

Shares are bought and sold at market price (closing price) not net asset value (NAV) are not individually redeemed from the Fund. Market price returns are based on the midpoint of the bid/ask spread at 4:00 pm Eastern Time (when NAV is normally determined), and do not represent the return you would receive if you traded at other times. Buying and selling shares will result in brokerage commissions. Brokerage commissions will reduce returns.

There is no guarantee that the Fund will achieve its investment goal. Investing involves risk, including the possible loss of principal. High yielding stocks are often speculative, high risk investments. The underlying holdings of the fund may be leveraged, which will expose the holdings to higher volatility and may accelerate the impact of any losses. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund's performance. International investing may involve risk of capital loss from unfavorable fluctuations in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. Investments in smaller companies typically exhibit higher volatility. Narrowly focused funds typically exhibit higher volatility.

There is no guarantee dividends will be paid. Diversification may not protect against market loss.

There are special risks associated with margin investing. As with stocks, you may be called upon to deposit additional cash or securities if your account equity declines.

The MSCI EM TR (Emerging Markets Total Return) Index is a free-float weighted equity index that captures large and mid-cap representation across Emerging Markets (EM) countries. The index covers approximately 85% of the free float-adjusted market capitalization in each country.
